1. Clear small items (knick-knacks, breakables, books, toys, etc) off of furniture being moved – make sure to remove any breakables from inside of furniture (ie. china cabinet).
2. Remove boxes and small items (toys, etc.) from floor.
3. Remove bedding from beds.
4. Clear bottoms of closets - anything on the floor and items hanging with less than 3ft of clearance must be removed.
5. Unplug electronics from the wall and disconnect from each other. Labeling cords before you disconnect can save you hours later when you reassemble your electronic systems.
6. Cover items sensitive to dust with plastic. Removal of existing flooring often stirs up large amounts of dust - our installers take care to contain the dust within the installation areas; however, sensitive items should be protected with plastic.
7. Make arrangements for pets and children to be kept away from installation areas – tackstrip, adhesive, and other installation materials can be hazardous. This is especially important for projects requiring multiple days to complete.
8. Make arrangements to ensure installation areas will be freely accessible - notify gate staff as necessary.
